

# How the forward shortlist works

It reads every forward's record across League Two and the leagues around it, puts them on one fair scale, and points us to the players worth watching.

## From raw numbers to a shortlist

### One example: why league strength matters

Goals and assists per game in the Highland League

Highland League scale against League Two

His output on a League Two scale

A striker with 27 goals and 4 assists in 32 Highland League games looks prolific. Translated to League Two he is still a strong prospect, but not the 0.97 his raw numbers suggest. Every player is compared on that fair footing.

## Two ratings, two questions

### Right now

#### Who would help us this season?

Looks at his goals and assists over recent seasons, adjusted for league strength, and how many games he has actually played.

### Going forward

#### Who is the better signing over the next few seasons?

Starts from the same picture, then weighs his age and his form: improving, dropping off, or recently stepped up a level.
